Key Features

- ☐ Connect up to 24 802.3at / 802.3bt (4-Pair and 2-Pair) PSE Ports
- ☐ Continuous 2-Pair Loading > 47 Watts Per PSE Port x 24 Ports
- ☐ Continuous 4-Pair Loading > 99 Watts Per PSE Port x 12 Ports
- ☐ Industry Leading IEEE 802.3bt and 802.3at PoE PSE Conformance Tests
- ☐ Flexible 802.3at / 802.3bt Powered Device Emulation Including PoE LLDP
- ☐ Unique, Fully Automated Multi-Port PSE System Analysis for 2-Pair PSE's
- ☐ One-Click 2-Pair and 4-Pair PSE Waveform Analysis
- ☐ Automated PoE LLDP Protocol Analysis
- ☐ Highly Scalable and Upgradeable Test Ports and Features
- ☐ High Level Script Automation and Powerful Graphical User Interface
- ☐ Flexible and Accurate Measurements of Voltage, Current, Power, & Noise
- ☐ Noise Immune Triggering and Flexible Load Transients
- ☐ Supports PSE Packet Transmission Testing with PoE Loads
- ☐ Smart Fan Control – Runs Cool and Quiet

Overview

Power-over-Ethernet (PoE) challenges design and test engineers to evaluate multi-channel, "intelligent" DC power sources that are activated and deactivated through signaling protocols operating over several power delivery and polarity configurations. The application and management of DC power over multiple local area network connections must be completely transparent and non-disruptive to the traditional data transmission functions of those network connections.

One Box Solution
Sifos Technologies provides a **one-box solution** to facilitate complete testing and analysis of Power Sourcing Equipment (PSE) behaviors including overall compliance to all **IEEE 802.3at** and **802.3bt** specifications. Each PowerSync Analyzer test port is an autonomous and fully isolated instrument offering a rich set of stimulus and measurement resources for **2-Pair** PSE testing. Each test slot can be configured as an autonomous and fully isolated instrument for testing **802.3bt** and pre-standard **4-Pair** PSE's from either test port in that slot.

Automated 802.3bt & 802.3at PSE Conformance Testing
The PSA-3000 may be optioned via license keys to run the industry's most advanced PSE Conformance Test Suites for **802.3bt 4-Pair** PSE's and **802.3bt/802.3at 2-Pair** PSE's. These **fully automated** test applications apply the PowerSync Analyzer's diverse resources to assess over 340 4-Pair and over 70 2-Pair specification parameters per port (up to 24 ports), presented in easily readable spreadsheet reports with multi-port statistics and clearly notated pass/fail limit analysis.

The PowerSync Analyzer and the 2-Pair PSE Conformance Test Suite may be used to qualify PSE's for the Ethernet Alliance PoE Logo under the Ethernet Alliance PoE Certification Program.

Analyzing & Troubleshooting 4-Pair and 2-Pair PSE's
The PSA-3000 provides extensive resources under control of PSA Interactive graphical user interface software and PowerShell PSA scripting software to facilitate insights into many PSE behaviors and performance parameters. Easily emulate a wide range of 802.3at and 802.3bt PD's while evaluating PSE responses to user-defined PD behaviors. A rich set of standardized **one-click waveforms** and **one-button test loads** make swift work of exposing both 4-Pair and 2-Pair PSE's to the vast array of PD's and connection environments described under the 802.3bt and 802.3at standards.

Automated 2-Pair PSE System Testing
PSA-3000's may be optioned via a license key to run the one-of-a-kind **2-Pair PSE Multi-Port Suite**. This software offers flexible, programmable, simultaneous **Live PD Emulation** of up to 192 independent Powered Devices including 802.3at Type-2, LLDP capable devices. The fully automated **Multi-Port Test Suite** for 2-pair PSE's evaluates PSE power allocation decisions and power management behaviors in response to multi-port PD loads including Type-2 PD's that negotiate power using PoE LLDP. Results are presented in colorful graphical reports.

LLDP Emulation for 802.3at and 802.3bt
The IEEE 802.3at and 802.3bt specifications describe PSE's and Powered Devices (PD's) that communicate precise power demands and allocations using Ethernet layer 2 (LLDP) protocols. The PSA-3000 may be optioned via a license key to flexibly emulate PD's and to analyze the power negotiation protocols between PSE's and PD's.

PSA Interactive Graphical User Interface

The Sifos **PSA Interactive** graphical user interface (GUI) is a flexible and powerful tool that enables users to access and manage many of the resources and testing functions available in a PSA-3000 instrument. **PSA 5.x** software introduces a second generation of PSA Interactive offering the following key features:
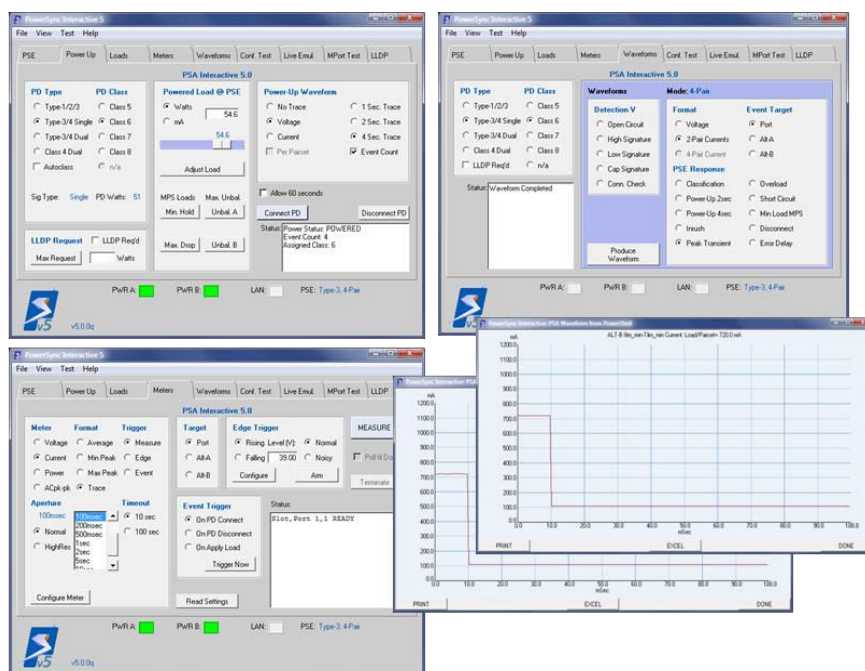

- Intelligent Management of 2-Pair and 4-Pair PSE Connections
- Seamless Integration Between 802.3at and 802.3bt PSE Testing Processes
- Seamless Integration of Newer PSA-3202 Test Blades and Older PSA-3102 Test Blades
- Ergonomic Tab Menu Scheme
- Highly Flexible PD Emulations and PSE Stimulus-Response Assessments
- Full Support for All 802.3bt Automated Test Suites
- Full Support for All 802.3at Automated Test Suites
- Adaptive behaviors respond to PSE Attributes

Included in the second generation PSA Interactive GUI is an intelligent **Slot-Port Selection Panel** and a tab menu window with nine tab menus:

- **PSE**: Learn, Declare, Load, and Save **PSE Attributes** that are essential to test port configuration and to automated test functions and utilities
- **Power Up**: Flexibly emulate and then connect **802.3at**, **802.3bt**, and **proprietary 4-Pair PD's** while observing PSE behaviors and responses to those PD connections
- **Loads**: Select and apply elemental signatures, static DC loads, and flexible load transients to **2-Pair** and **4-Pair** PSE's
- **Meters**: Configure and perform a wide variety of measurements on **2-Pair** and **4-Pair** PSE's with a variety of triggering options

PSA Interactive Tab Menu and Slot-Port Panel

- **Waveforms**: Configure and capture a wide variety of one-click waveforms that perform stimulus-response evaluations of **802.3at** and **802.3bt** PSE's. Flexibly emulate **802.3at**, **802.3bt**, and **proprietary 4-pair** PD's

- **Conf. Test**: Configure and sequence either the **4-Pair** or **2-Pair** PSE Conformance Test Suite from an adaptive user interface
- **Live Emul***: Configure and emulate between 1 and 192 **802.3at** PD's (*using traditional PSA 4.2 Multi-Port menus*)
- **MPort Test***: Configure and run the **2-Pair** PSE Multi-Port Test Suite (*using traditional PSA 4.2 Multi-Port menus*)
- **LLDP**: Configure and run **802.3bt** or **802.3at** LLDP protocol traces while emulating any 802.3 PD type including 802.3bt dual signature PD's

* The **Live Emul** and **MPort Test** tab menus will evolve to add resources for **802.3bt** PSE testing as those resources become available.

PowerShell PSA Tcl/Tk Interface

The PowerShell PSA Scripting Environment provides a high level, interactive means to control and program automated test sequences for the PSA-3000 PowerSync Analyzer. PowerShell PSA enables fully automated testing suites that span multiple ports, blades, and instruments. Built upon the powerful and extensible Tool Command Language (Tcl), it offers an effective programming language well suited for automated testing.

PowerShell PSA provides a complete API for the PSA-3000 instrument including an extensive command set that ranges from elemental resource configurations to high level automated tests and test sequencers. Starting with PSA software version 5.0, PowerShell PSA seamlessly manages transitions between 802.3at (2-Pair) PSE testing and 802.3bt (4-Pair) PSE testing. Many PowerShell PSA commands and utilities automatically take on personalities governed by test port configurations (for example, **2-Pair** versus **4-Pair** and 4-Pair signature type).

PowerShell PSA can be integrated into broader Tcl environments that combine network transmission and Power-over-Ethernet tests.

Other features offered by the PowerShell PSA environment include:

- Interpretive command execution (no compilation, easy debug)
- Simple, intuitive PowerSync Analyzer commands (API)
- Integrated and extensive command "help" features
- Smart prompt that tracks selected test port configuration
- Command-Knowledgeable Wish Console with PSA waveform viewer capability
- Notepad++ Editor for PowerShell PSA script editing & debugging
- Flexible test suite sequencing including compound sequences
- Traditional Tcl Command Console
- Extensive PowerShell PSA command documentation

IEEE 802.3bt & 802.3at PSE Conformance Test Suites

The PSA-3000 may be licensed for fully automated conformance testing of **4-Pair** (802.3bt) PSE's and/or **2-Pair** (802.3bt, 802.3at) PSE's. The PSE Conformance Test Suites are libraries of **fully automated, flexibly sequenced,** and **self-adapting** tests that provide a high degree of specification compliance testing of PSE ports without the need for any external instrumentation. Each PSE Conformance Test Suite fully assesses interoperability of one or more PSE ports given a single button press or single command. Colorful Microsoft Excel spreadsheet reports analyze all test results relative to the applicable IEEE 802.3 specification parameters, flagging failures and compiling statistics.

The PSE Conformance Test Suites from Sifos serve as de facto industry standards for PSE specification compliance. Testing can be completed without deep, internal knowledge of the 802.3 PoE standards and without high expertise in PSA-3000 capabilities. Test coverage **exceeds 90%** of 802.3bt and **95%** of 802.3at PSE PICS. See Sifos datasheets, **PSE 4-Pair Conformance Test Suite Overview** and **PSE 2-Pair Conformance Test Suite Overview**.

PSE Multi-Port Suite for 2-Pair 802.3bt & 802.3at PSE's

While IEEE 802.3 standards describe a PSE as a single port device, most PSE's are multi-port systems such as Ethernet switches. This fact leads to the need for system test methods and tools to assess PSE behavior across a multitude of ports. The licensed optioned **PSE Multi-Port Suite** offers two fundamental testing capabilities that address this need.

2-Pair Multi-Port PD Emulation turns every PSA-3000 test port into an emulated 802.3at Powered Device where behaviors such as static power load, PD classification, line power loss, and even PoE LLDP protocol characteristics are modeled simultaneously across as many as 192 PSA ports. Virtually any 802.3at PD may be emulated. See Sifos datasheet, **Multi-Port Live PD Emulation Overview**, for further information on Live PD Emulation.

The **Multi-Port Test Suite** is a set of fully automated tests and reporting that takes the PSA-3000 into the realm of fully automated 2-Pair PSE System Power Management and Multi-Port Stimulus-Response testing. The Multi-Port Test Suite assesses system-wide behaviors only observable when many IEEE 802.3at PD's are powered by a PSE. The test suite will acquire and distill information regarding key behaviors of a PSE including **class-based power administration**, multi-port **LLDP granting**, power-up and LLDP grant timing, **static power** capacity, **transient reserve** capacity, power down timing, power-per-port **uniformity and uncertainty**, and power **stress test** analyses. Results are presented in colorful, graphical spreadsheet reports. See Sifos datasheet, **Multi-Port 2 Test Suite Overview**.

802.3bt & 802.3at PoE LLDP Emulation and Analysis

The PSA-3000 includes a license optioned subsystem designed to flexibly emulate all **802.3bt** and **802.3at** LLDP capable PD's on a per test port basis. Fully automated tools enable capture and analysis of protocol and protocol timing between the PSE and the PD.

See Sifos datasheet, **LLDP Emulation & Analysis for the PowerSync Analyzer**.

LLDP Protocol Trace

2-Pair Multi-Port High Throughput PSE Verification

The PSA-3000 is provided with a sample PSE automated test script, **psa_quick_test**, that recovers several important parameters from 2-Pair (802.3at or 802.3bt) PSE ports with an effective test throughput of less than 15 seconds per tested port. This application can be used in both QA and manufacturing test to *rapidly* qualify PSE functional performance.

Important features of the **psa_quick_test** include:

- **Source Code Provided**: May be used as is, may be modified, or may be used as template script
- Scans 4 to 8 PSE ports per test cycle
- Tests **Type-1, Type-2** (**2-event**), and **Type-2** (**LLDP***) PSE's
- Validates PoE **Detection Acceptance** and **Rejection** Ranges
- Measures PSE **Port Voltage** at min. and max. load conditions
- Determines **Power Capacity** in Watts and mA
- Assesses **Disconnect Power Removal** response and timing
- Assesses **Overload Power Removal** and **Power-Type Threshold**
- Assesses **LLDP Power Allocations*** and associated timing
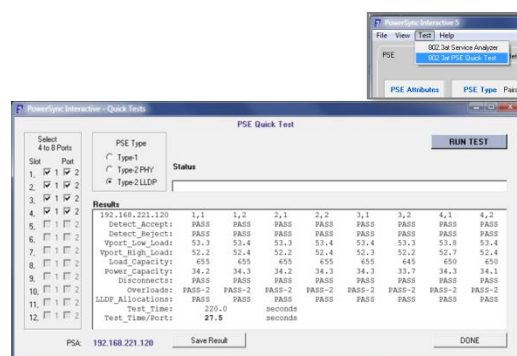

PSA Quick Test Menu in PSA Interactive

Typical test times will range from 8 to 14 seconds per port tested including tests of Type-2 LLDP capable PSE's.

		Event Trigger Latency	< 500 µsecs
	Trigger Noise Immunity	Pre-Trigger Qualification Time (Voltage below Rising threshold or above Falling threshold)	1.5 msec
		Normal Mode Edge Noise Rejection	125 mV
		Noisy Mode Edge Noise Rejection	500 mV

Time Interval Metering Specifications

Description	Conditions	Parameter	Specification
Time Interval Meter	Microsecond scale	Time Range	4 – 26200 µs
		Time Resolution	1 µsec
		Time Accuracy	± 2 µsecs
		Min. Resolvable Time Interval	~ 4 µsecs
	Millisecond scale	Time Range	2-6550 msec
		Time Resolution	0.1 msec
		Time Accuracy	± 1 msec
		Min. Resolvable Time Interval	2 msec

Time Interval Metering Specifications

Description	Conditions	Parameter	Specification
Time Interval Meter (con'd)	Second Scale	Time Range	0.1 – 16.1 sec
		Time Resolution	0.1 sec
		Time Accuracy	± 50 msec
		Min. Resolvable Time Interval	0.1 sec
	Triggering & Noise Immunity	Start Trigger	Edge or Event
		Stop Trigger	Edge
		Normal Mode Edge Noise Rejection	125 mV
		Noisy Mode Edge Noise Rejection	500 mV

LED Indicators – PSA-3202

LED Label	Parameter	Description
LINK	LLDP Link Status & Activity	**GREEN:** Linked at 100Base-Tx for LLDP, Blink with Activity **AMBER:** Linked at 10Base-T for LLDP, Blink with Activity **OFF**: Unlinked (or Disconnected)
PD	PoE Power Status	**GREEN**: PSE powered with Vport > 36 VDC **AMBER**: Valid 802.3 Detection Signature Connected (No PSE Power) **OFF**: PSE not powered & PD signature not connected
4PR	Test Port Mode	**GREEN:** Test port configured for 4-Pair powering **AMBER**: Opposite test port configured for 4-Pair powering **OFF:** Test port configured for 2-Pair powering
COM	Communications	**ON**: Indicates active communications with test port

*For **PSA-3102** LED Indicators, see Section 3 of PSA-3000 Technical Reference Manual.*

Programming and Control

Description	Specification
Interface	Ethernet 10/100BaseT (*Telnet Port 23 protocols*) **NOTE**: The **Console** interface is for IP Address config only.
Host Requirements	PC running Microsoft Windows XP, Vista, 7, 8, 10, or Linux PC (Fedora, SUSE, Debian)
Control Environment	Sifos PowerShell PSA or PSA-Interactive
Recommended Network Latency:	< 5 msec

Physical and Environmental

Description	Specification
Dimensions	19"W x 5.25"H x 12"L (3U Rack Mount)
Weight	20.4 lbs. (Fully Populated with PSA-3x02 Cards)
Power	100VAC-240VAC, 50-60 Hz, 1.35A Max.
Ambient Operating Temperature	0°C to 40°C (≤ 100W combined PoE loading per test blade or 50W per test port)
Storage Temperature	-20°C to 85°C
Operating Humidity	5% to 95% RH, Non-Condensing.

Certifications

Description	North America	Europe & International
Safety	**CSA Listed** (CSA22.2 No. 61010)	EN61010-1 (Test & Measurement Equipment)
Emissions	FCC Part 15, Class A ICES-001	EN55011 (Class A Radiated Emissions) EN61326-1 (EMC) VCCI, AS/NZS 3548
European Commission		Low Voltage Directive (2014/35/EU) Electromagnetic Compatibility Directive (2014/30/EU) RoHS 2 Directive (2011/65/EU) **CE Marking** Directive (93/68/EEC)

FCC Statement: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at their own expense.

Ordering Information

PSA-3000, PowerSync Analyzer 3000 Chassis & Controller, PowerShell PSA, and PSA Interactive Software

PSA-3202, Dual Port PSE Test Blade for IEEE 802.3at, IEEE 802.3bt, & Pre-802.3bt 4-Pair Testing

PSA-LLDP, IEEE 802.3at/802.3bt LLDP Emulation & Analysis Feature for One PSA Address (*Up to 24 Test Ports*)

PSA-CT4P*, 4-Pair PSE Conformance Test Suite for One PSA Address (Up to 24 Test Ports)

PSA-CT2P*, 2-Pair PSE Conformance Test Suite for One PSA Address (Up to 24 Test Ports)

PSA-MPT, 2-Pair PSE Multi-Port Suite for One PSA Address (*Up to 24 Test Ports*)

* **NOTE:** *See PSE Conformance Test Datasheets for all part numbers and descriptions associated with the 4-Pair and 2-Pair PSE Conformance Test Suites.*

Accessories Included:

- Installation Guide & Configuration Chart
- PSA Software (CD, USB Stick)
- PowerSync Analyzer Reference Manual (Hardcopy, CD, USB Stick)
- Power Cord
- Cross-Over Ethernet Cable
- USB Cable
