

# UAT-600-EUR Series Underground Utilities Locator

# Accurately and safely pinpoint underground utilities before you dig

Accidentally hitting an utility line during a project can lead to costly repairs and create hazardous public safety situations. Digging in the wrong place can also lead to unnecessary delays and costs for your project, and ultimately, your company. Avoid this disruption with the rugged and durable Beha-Amprobe UAT-600-EUR Series, designed to accurately pinpoint underground utilities and buried services.

Designed for electricians with a CAT IV 600 V rating, the locating kits come complete and ready for use with a Transmitter, Receiver, test lead kit, batteries and additional fuses, all in a mobile, protective duffle bag.

The UAT-620-EUR kit also includes a Signal Clamp for transmitting a signal when it is not possible to make electrical contact with the cable to be traced. For applications where ground fault locating is required, use the UAT-600-TE Transmitter in combination with the optional A-Frame accessory.

# Features and Highlights

- Multiple tracing modes allow you to locate and trace energized and de-energized utilities in a variety of applications
- The intuitive Transmitter automatically chooses the correct locating function based on the connected accessory and includes selectable 8/33 kHz frequencies
- The Receiver's high-contrast display allows for clear viewing in full sunlight and features an automatic backlight for shaded and dark areas
- Rated CAT IV 600 V, ensuring safety when working with energized cables
- Semi-automatic gain control quickly detects tracing signal and allows precise adjustment of the receiver sensitivity
- Accurate depth measurement to 6 meters, detect and trace utilities buried up to 30 meters deep
- **Rugged, durable construction:** water and dust resistant to IP54 and drop proof to 1 m (3.28 ft)

# What sets the UAT-600 Series apart is its CAT IV 600 V safety rating.

## Unparalleled safety

#### Stop compromising time and safety.

What truly sets the UAT-600 Series apart from other underground locators is its CAT IV 600 V safety rating. This allows you to safely connect the Transmitter directly to an energized line up to 600 V in a CAT IV environment. Previously, if a crew needed to trace a specific electrical line by transmitting a signal through it, the line had to be de-energized first, adding time and reducing productivity.

- **Use the Signal Clamp** to induce a signal without making electrical contact (UAT-620-EUR)
- **Ground fault locating** with the optional A-Frame accessory
- Comes as a complete kit, ready for use

AF-600-EUR A-Frame Accessory\* Ground Fault Locator See page 2 for specifications \* (Not included in the UAT-610-EUR and UAT-620-EUR Kits)

Safety Certification Safety Certification All Beha-Amprobe tools, including the Beha-Amprobe UAT-600-EUR Series, are rigorously tested for safety, accuracy, reliability, and ruggedness in our state-of-the-art test lab. In addition, Beha-Amprobe products that measure electricity are listed by a 3rd party safety lab, either UL or CSA. This system assures that Beha-Amprobe products meet or exceed safety regulations and will perform in a tough, professional environment for many years to come.

# AF-600-EUR A-Frame GroundFaultLocator

#### Save time and money by pinpointing leakage points

Ground faults are a common problem with electrical cables. Find any fault with the AF-600-EUR A-Frame cable ground fault locator, specifically designed for use with the Beha-Amprobe UAT-600-EUR Series.

Set up the UAT-600-TE Transmitter to apply a fault find signal to the utility under test, the AF-600-EUR A-Frame receives the signal and locates the place of the fault. The AF-600 will pinpoint where a cable metal conductor (either a sheath or a metallic conductor of the wire) touches the ground and can also detect other conductors to ground faults such as pipeline coating defects.

# Features and Highlights

- Identify any point of leakage around a cable
- Locate cable and wire ground faults, sheath faults or pipeline coating defects, where the utility is in direct contact with the ground
- Find the exact point where metal is touching the ground and power is leaking, ie, a shield is rusted or a rubber buffer is broken, creating noise on a cable
- Advanced technology and digital signal processing makes pinpointing process fast, accurate and clear:
  - Compass guidance with numeric fault field strength indicates the direction of the fault
  - Distance sensitive left and right arrows guides the user to precisely follow the path of the buried utility
  - Automatic gain control quickly detects tracing signal and precisely adjusts the A-Frame sensitivity
  - Adjustable volume controls

The AF-600-EUR comes complete with batteries and a carrying case

| Safety compliance   | IEC 61010-1, CSA/UL 61010-1   |  |
| Size (H x W x L)  | Approx. 355 x 230 x 120 mm (14 x 9 x 4.7 in)  |  |
| Weight  | Approx. 1.9 kg (4.2 lb) (batteries installed)   |  |

AF-600-EUR A-Frame includes: A-Frame Receiver, (6) 1.5 V AA (IEC LR6) Batteries, Carrying Case, User Manual

# SC-600-EUR Signal Clamp (included in the UAT-620-EUR Kit only)

The Signal Clamp accessory provides an efficient and safe method of applying a locate signal to a cable, enabling the Transmitter to induce a signal through the insulation into the wires or pipes. The clamp works on low impedance closed circuits only.

Trace an individual utility by connecting the transmitter directly with the test leads

#### **Main applications**

- Locate energized 50/60 Hz cables carrying current
- Identify the location of all metallic utilities: pipes\*, energized and de-energized cables
- Trace individual pipes\* or cables (energized or de-energized)
   \*Tracing of non-metallic pipes and conduits is possible after inserting metal fish tape or cable

#### **Two passive modes** using only the UAT-600-RE Receiver

- Passive power mode (50/60 Hz) tracing energized lines conducting current (no Transmitter necessary)
- Passive radio mode (RF) using surrounding radio waves to trace underground utilities (no Transmitter necessary)

The Transmitter will automatically change modes based on which accessory is plugged in

# Three active modes using the UAT-600-TE Transmitter

- Induction the Transmitter will automatically start to radiate a signal around it using an internal antenna, used for tracing individual cables where there is no access to the line to connect test leads or a clamp
- Direct connection with test leads - the most reliable method to trace individual cable or a pipe
- **Clamp** (Included in the UAT-620-EUR kit, optional for the UAT-610-EUR kit) - provides an efficient and safe method of applying a locate signal to a cable, where it is not possible/safe to gain access to a cable for making an electrical contact

The Receiver's high contrast LED screen is easy to read in full sunlight

#### **Special applications**

- 2 frequency options: 8 kHz and 33 kHz
- Locate non-metallic pipes and sewer lines
- Take depth and current measurements
- Measure voltage, resistance and output current
- Advanced locating with two people
- Locate ground faults with the AF-600-EUR A-Frame accessory

## Customers who use Beha-Amprobe Underground Locators

- Commercial and Residential Construction Contractors
- Water, Gas and Electric Installation and Repair Crews
- Pipe Laying Contractors
- Cable TV & Telecommunication
   Companies
- Electricians & General Contractors
