Q4X Series

Versatile, Rugged Laser Distance Sensor

- Housing rated to IP69K with FDA-grade stainless steel
- Discrete, Analog, IO-Link outputs available
- Precise measurement up to 610 mm
- Reliably detects opaque and transparent objects

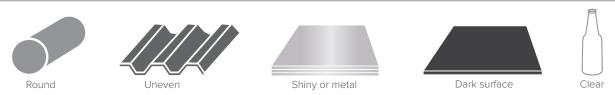

Easy-to-Use Problem Solver

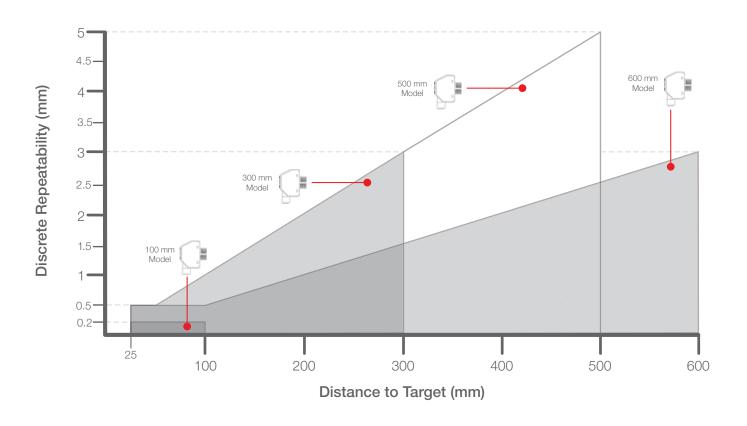

Reliable, durable sensor that solves even the most challenging applications

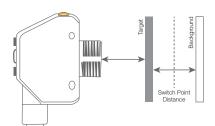

Challenging Targets

Dynamically adjusted laser power increases output for dark targets or objects at steep or uneven angles, while reducing power for shiny targets, providing accurate measurements across a wide range of challenging targets.

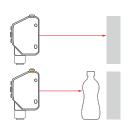

Minimum Object Separation refers to the minimum distance a target must be from the background to be reliably detected by a sensor.

	Distance (mm)				
	50	100	300	500	600
Q4X100 / 110	0.5	1	_	-	_
Q4X300 / 310	1	2	14	_	-
Q4X500	1	2	14	45	-
Q4X600 / 610	1	2	5.25	8.25	10

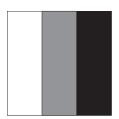

Dual Mode: Distance with Intensity to Detect Any Change

Clear Object Detection

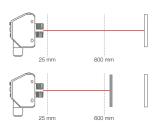

Reliably detects transparent objects without the need of a retro reflector.

Contrast

Detects intensity changes due to variation in surface finish, tone, or lightness.

Extended Range Presence/Absence

Teach reference to detect changes in contrast, even past the maximum measuring range.

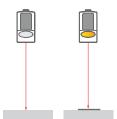

Presence and Absence

Application Challenge

The presence of tea bags on a conveyor must be verified to trigger processes down the line. The tea bags can vary in shape and color consistency, complicating detection. At times there can be little contrast between the tea bags and the conveyor, further complicating detection.

Application Solution

A Q4X measures the distance from the face of the sensor to the conveyor. Capable of identifying sub-millimeter changes in distance, the Q4X easily detects the slight variations in height that indicate the presence of a tea bag on the conveyor.

Distance-based presence/absence detection or part positioning regardless of color or reflectivity of object and background.

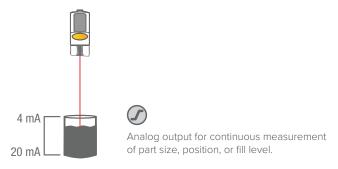

Measurement

Application Challenge

Measuring the fill level of pills in a bottle helps ensure that the quantities inside the bottle are correct. However, the shape, edges, and gaps between pills create an inconsistent surface that is difficult to measure.

Application Solution

A Q4X analog sensor set up in trigger mode uses the averaging feature to provide a more consistent fill-level measurement. A connected Q3X contrast sensor detects the leading edge of each bottle and uses a one-shot output timer to determine when and how long the Q4X will measure. The Q4X then measures across the varying surface inside the bottle and outputs a single analog value based on the average measurement.

Error Proofing

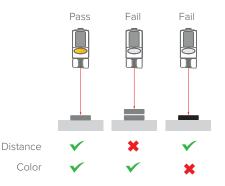

Application Challenge

In a car speaker assembly, the presence and placement of all components must be verified to ensure that defective or incomplete product is not shipped to the customer. The small sizes, slim profiles, and similar colors of many components can make identifying errors difficult.

Application Solution

By measuring the distance from the face of the sensor to the mounting bracket, a Q4X verifies that a single spacer is present and properly seated. Using dual-mode detection, the Q4X can also measure the amount of light received to determine if the spacer has been placed with the adhesive side up or down. The compact size of the Q4X allows for an unobtrusive installation into congested assembly stations.

Inspections use distance to verify parts presence and position, and intensity to verify correct color or part orientation

Clear Object Detection

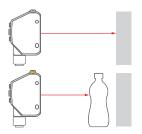

Application Challenge

Regulating the flow of bottles on a conveyor can prevent damage to the bottles, product loss, and machine downtime. It also helps ensure that downstream processes progress smoothly. Variations in bottle shape, size, material, color, and transparency can make detecting bottles and accumulations difficult.

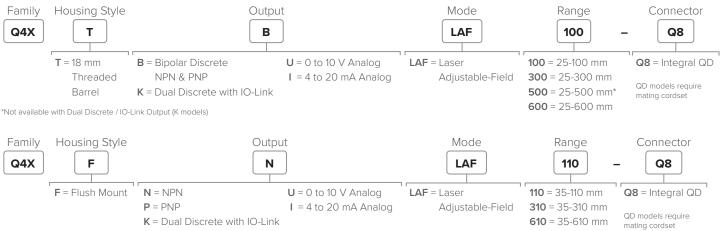

Application Solution

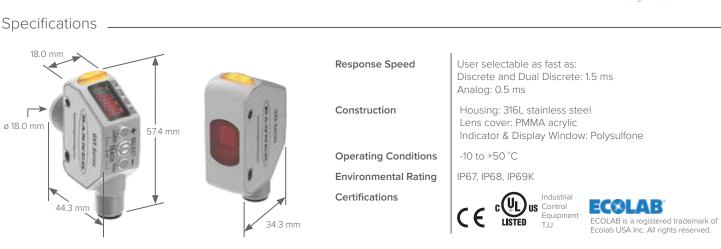

Taught to recognize a stable background condition, a Q4X operating in dual mode will detect any alteration in the distance to and light intensity from the background condition, making the sensor immune to variations in bottle shape, size, color, clarity, and reflectivity. The Q4X has integral on/off delays that can send a signal if an accumulation occurs.

Reliably detects transparent objects without the need of a retro reflector.

Accessories

SMBQ4XFA

Includes 3/8" bolt for mounting

SMBQ4XFAM10

Includes 10 mm bolt for mounting

SMBQ4XFAM12

Clamps directly onto industry standard bracket systems of 1/2" or 12 mm rods

Cordsets for Analog Models

0 to 10 V. 4 to 20 mA

Straight connector models listed; for right-angle, add RA to the end of the model number (example, MQDEC2-506RA)

5-Pin

MQDEC2-506 2 m (6.5') MQDEC2-515 5 m (15') MQDEC2-530 9 m (30')

RSD1QP remote display

Provides easy sensor configuration and monitoring. Only works with Q4X600 and 610 models. Visit our website for more information.

Cordsets for Discrete Models

Bipolar (5-pin) and PNP, NPN and Dual Discrete (4-pin)

Straight connector models only

4-Pin MQDC-WDSS-0406 2 m (6.5') MQDC-WDSS-0415

5 m (15') MQDC-WDSS-0430 9 m (30')

MQDC-WDSS-0506 2 m (6.5') MQDC-WDSS-0515

5 m (15') MQDC-WDSS-0530

9 m (30')

SMB18A SMBAMS18RA
