# Technical Information **Prosonic S FDU91**

Ultrasonic measuring technology

# Ultrasonic sensor for level measurement and flow measurement

#### Application

- Continuous, non-contact level measurement of liquids and bulk solids in silos, on conveyor belts, in material stockpiles and in crushers
- Flow measurement in open flumes and measuring weirs
- Maximum measuring range: 10 m (33 ft) in liquids; 5 m (16 ft) in bulk solids

#### Your benefits

- Integrated temperature sensor for time-of-flight correction, enabling accurate measurements even if temperatures change
- Hermetically welded PVDF sensor for maximum chemical resistance
- Suitable for harsh ambient conditions thanks to separate transmitter installation (up to 300 m (984 ft))
- Self-cleaning effect ensures minimum deposit build-up
- Weather resistant and flood-proof (IP68)
- International Dust-Ex and Gas-Ex certificates available

### Function and system design

#### Level measurement

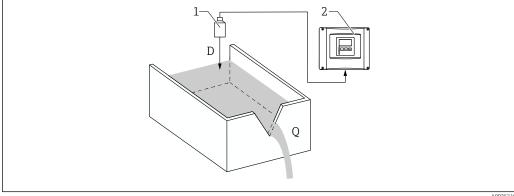

- Prosonic S sensor
- Prosonic S transmitter 2
- Blocking distance
- Distance between reference point (sensor membrane) and surface of medium
- Е Empty distance
- F Span
- Level

The sensor transmits ultrasonic pulses in the direction of the surface of the medium. There, they are reflected back and received by the sensor. The transmitter measures the time t between the transmission and reception of a pulse. From this time, and using the sonic velocity c, the transmitter calculates the distance D between the reference point (sensor membrane) and the surface of the medium:

 $D = c \cdot t/2$ 

The level L is derived from D. With linearization, the volume V or the mass M is derived from L.

#### Flow measurement in flumes or weirs

- Prosonic S sensor
- Prosonic S transmitter 2
- D Distance between sensor membrane and surface of liquid
- Q Flow

The sensor transmits ultrasonic pulses in the direction of the surface of the liquid. There, they are reflected back and received by the sensor. The transmitter measures the time t between the transmission and reception of a pulse. From this time, and using the sonic velocity c, the transmitter calculates the distance D between the (reference point) sensor membrane and the surface of the liquid:

 $D = c \times t/2$ 

The level L is derived from D. With linearization, the flow Q is derived from L.

### Temperature-dependent time-of-flight correction

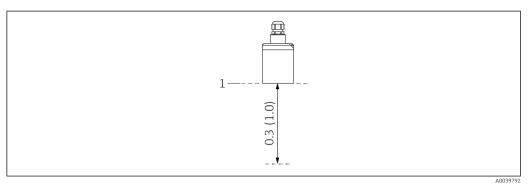

Temperature-dependent time-of-flight correction via an external temperature sensor, to be connected to the FMU90 transmitter.

#### Input

**■** 1

#### Blocking distance

Signals within the blocking distance (BD) range cannot be measured due to the transient response of the sensor.

Blocking distance of the ultrasonic sensor. Engineering unit m (ft)

1 Reference point (sensor membrane) of measurement

#### Measuring range

#### Estimation of the effective sensor range depending on the operating conditions

- 1. Add up all the applicable attenuation values from the following lists.
- 2. From the total calculated attenuation, use the range chart below to calculate the range of the sensor.

#### Attenuation caused by surface of liquid

- Calm surface: 0 dB
- Waves on surface: 5 to 10 dB
- Very turbulent surface: 10 to 20 dB
- Frothy surface: contact Endress+Hauser: http://www.endress.com/contact

#### Attenuation due to bulk solids surface

- Hard, rough surface (e.g. rubble): 40 dB
- Soft surface (e.g. peat, dust-covered clinker): 40 to 60 dB

#### Attenuation due to dust

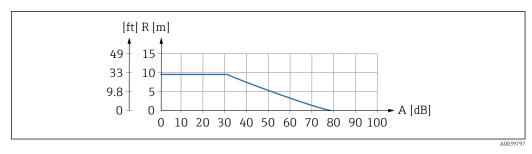

- No dust formation: 0 dB
- Minor dust formation: 5 dB
- Major dust formation: 5 to 20 dB

#### Attenuation caused by filling curtain in detection range

- No filling curtain: 0 dB
- Small volumes: 5 dB
- Large volumes: 5 to 20 dB

#### Attenuation caused by temperature difference between sensor and product surface

- Up to 20 °C (68 °F): 0 dB
- Up to 40 °C (104 °F): 5 to 10 dB
- Up to 80 °C (176 °F): 10 to 20 dB

■ 2 Range chart for ultrasonic sensors

A Total attenuation in dB

R Range in m (ft)

#### **Operating frequency**

43 kHz

### Power supply

#### Supply voltage

Is provided by the transmitter.

### Power supply to integrated sensor heater

#### Device versions with sensor heater

FDU91-\*\*\*B\*

#### Connection data

- $\blacksquare$  Supply voltage: 24  $V_{DC} \pm$  10 %
- Residual ripple: < 100 mV
- Current consumption: 250 mA per sensor
- Suitable power supply unit: RNB130 from Endress+Hauser

- When the sensor heater is active, the integrated temperature sensor cannot be used. Instead, use one of the following external temperature sensors:
  - Pt100
  - Omnigrad S TR61 from Endress+Hauser
- For information on connecting the external temperature sensor, see Technical Information TI00397F.

#### **Electrical connection**

#### **General information**

#### NOTICE

#### Interference signals may cause malfunctions

 Do not route the sensor cables parallel to high-voltage electric power lines or near frequency converters.

#### NOTICE

#### A damaged cable shield may cause malfunctions

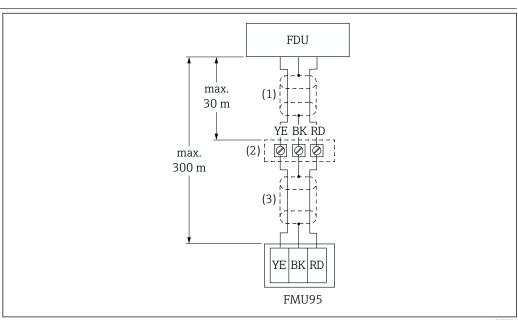

- lacktriangledown For pre-terminated cables: connect the black wire (shield) to the "BK" terminal.
- ► For extension cables: twist the shield and connect to the "BK" terminal.

#### Connection diagram for sensor → FMU90

- ₩ 3 Connection diagram for sensor; YE: yellow, BK: black; RD: red; BU: blue; BN: brown; protective conductor GNYE: green/yellow
- Without sensor heater Α
- В With sensor heater
- Shielding of sensor cable 1
- 2 Terminal box
- 3 Shielding of extension cable

#### Connection diagram for sensor → FMU95

- € 4 Connection diagram for sensor; YE: yellow, BK: black; RD: red; BU: blue; BN: brown; protective conductor GNYE: green/yellow
- Shielding of sensor cable
- Terminal box 2
- Shielding of extension cable

#### Extension cable specifications

- Maximum total length (sensor cable + extension cable) 300 m (984 ft)
- Number of wires

As per connection diagram

Shielding

One shielding braid for the YE wire and one for the RD wire (no foil shield)

Cross-section

0.75 to 2.5 mm<sup>2</sup> (18 to 14 AWG)

Resistance

Max.  $8\,\Omega$  per wire

Capacitance, wire to shield

Max. 60 nF

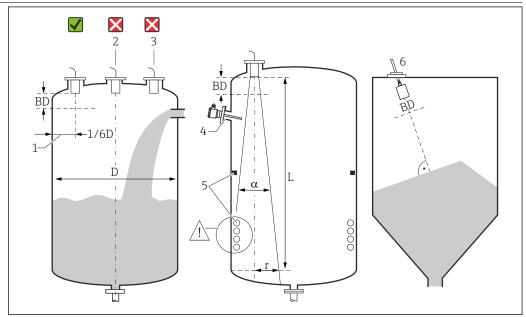

Suitable extension cables are available from Endress+Hauser.

#### Shortening the sensor cable

The sensor cable can be shortened if necessary (see the Operating Instructions for the FMU90 or FMU95 transmitter).

#### Installation

### Installation conditions for level measurement

A00367

- 5 Installation conditions for level measurement
- Recommended distance to the vessel wall: 1/6 of the vessel diameter D.
- 2 Do not mount in the center of the vessel.
- 3 Avoid measurements through the filling curtain.
- 4 There must be no internal fixtures in the signal beam.
- 5 Symmetrical internal fixtures, in particular, negatively impact the measurement.
- 6 For bulk solids: using the FAU40 alignment unit, align the sensor so that it is perpendicular to the surface of the product.
- BD Blocking distance

#### Emitting angle/beam

- $\alpha$  (typical) = 9°
- L (max) = 10 m (33 ft)
- r (max) = 0.79 m (2.6 ft)

#### Other conditions

- The lower edge of the sensor should be located inside the vessel
- The maximum level may not enter the blocking distance

#### Several sensors in one vessel

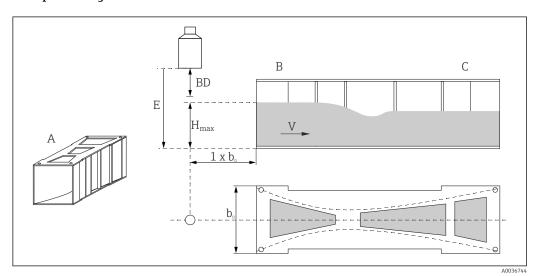

Sensors that are connected to a common FMU90 or FMU95 transmitter can be used in one vessel.

### Installation conditions for flow measurement

#### Conditions

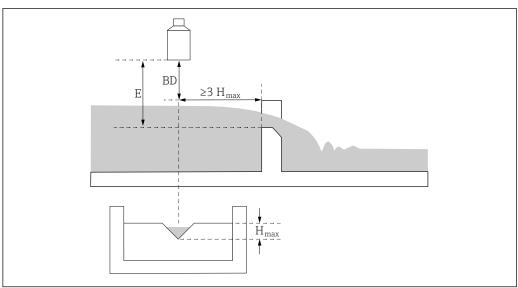

- $\blacksquare$  Mount the sensor on the upstream side above the maximum upstream level  $H_{\text{max}}$  plus the blocking distance BD
- Position the sensor in the center of the channel or weir
- Align the sensor so that it is perpendicular to the surface of the water
- Observe the specified mounting distance (clearance) to the flume constriction or weir edge See the Operating Instructions for FMU90 / FMU95
- Protect the sensor against sun and precipitation using the weather protection cover

#### Example: Khafagi-Venturi flume

- A Khafagi-Venturi flume
- b<sub>0</sub> Width of Khafagi-Venturi flume
- B Upstream side
- C Downstream side
- BD Blocking distance of the sensor
- *E* Empty calibration (to be entered during commissioning)
- $H_{max}$  Maximum upstream level
- V Flow

#### Example: Triangular weir

A0036745

BD Blocking distance of the sensor

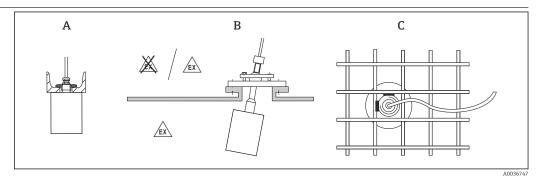

*E* Empty calibration (to be entered during commissioning)

 $H_{max}$  Maximum upstream level

Endress+Hauser

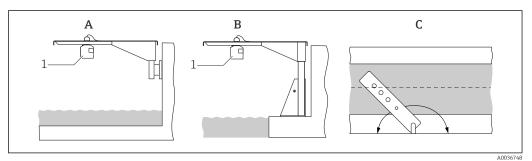

9

#### **Installation options** (examples)

**₽** 6 Installation in systems

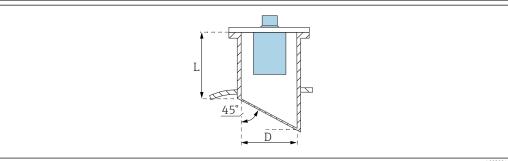

- Α On U-rail or bracket
- В With FAU40 alignment unit
- С With 1" sleeve welded to a grating

**₽** 7 Installation with cantilever arm over open channels or flumes

- Arm with wall bracket
- В  ${\it Cantilever\ with\ mounting\ frame}$
- The arm can be turned (e.g. to position the sensor over the center of the channel)

#### Nozzle mounting

- D Nozzle diameter
- Nozzle length L

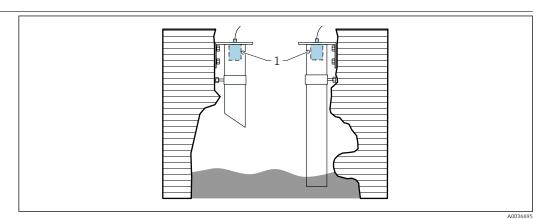

#### Conditions at the nozzle

- Smooth interior, without edges or welds
- No burr on the inside of the nozzle end on the tank side
- Beveled nozzle end on tank side (ideally: 45°)

#### Maximum nozzle length

- D = DN80/3":  $L_{max}$  = 340 mm (13.4 in) D = DN100/4":  $L_{max}$  = 390 mm (15.4 in) D = DN150/6" to DN300/12":  $L_{max}$  = 400 mm (15.7 in)

# Ultrasound guide pipe for measurement in narrow pits

1 Venting hole

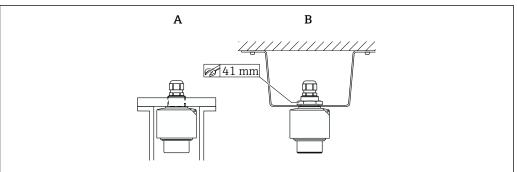

- Suitable ultrasound guide pipe: e.g. PE or PVC wastewater pipe
- Minimum diameter: DN100
- Venting hole at top
- No contamination from built-up dirt (clean regularly where necessary)

#### Securing the sensor

#### NOTICE

#### Risk of damage to the sensor

- ▶ Do not use the sensor cable for suspension purposes.
- ▶ Do not damage the sensor membrane when installing.

A0039841

- 8 Securing the ultrasonic sensor
- A Mounted at rear thread
- B Mounted with counter nut

### **Environment**

Degree of protection	Tested according to IP68/NEMA6P (24 h at 1.83 m (6 ft) under water)			
Vibration resistance	DIN EN 600068-2-64; 20 to 2000 Hz; 1 (m/s²)²/Hz; 3x100 min			
Storage temperature	Identical to process temperature			
Thermal shock resistance	Based on DIN EN 60068-2-14; test according to min./max. process temperature; 0.5 K/min; 1000 h			
Electromagnetic compatibility	Electromagnetic compatibility in accordance with all the relevant requirements outlined in the EN 61326 series and NAMUR Recommendation EMC (NE 21). For details, refer to the Declaration of Conformity. With regard to interference emission, the devices meet the requirements of class A, and are only designed for use in an "industrial environment".			

### **Process**

#### **Process temperature**

-40 to +80 °C (-40 to +176 °F)

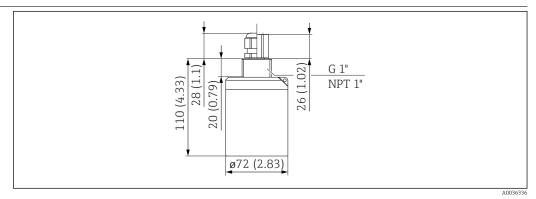

To prevent the build-up of ice on the sensor, the sensors are available in a version with integrated sensor heating.

Process pressure

0.7 to 4 bar (10.15 to 58 psi)

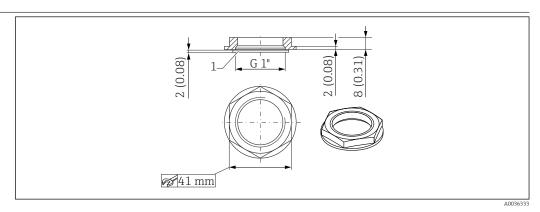

### Mechanical construction

#### **Dimensions**

**■** 9 Dimensions. Unit of measurement mm (in)

# Dimensions of G1" counter nut

🖪 10 Counter nut; dimensions. Unit of measurement mm (in)

i

- The counter nut is included in the delivery for the following sensors: FDU91-\*G\*\*\* (rear G1 thread)
- The counter nut is not suitable for NPT threads.

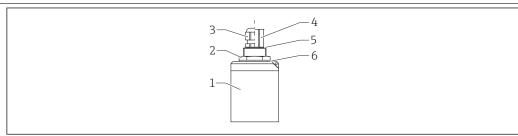

#### Weight

Weight including cable 5 m (16 ft))

Approx. 1.1 kg (2.43 lb)

12

#### **Materials**

A002071E

#### ■ 11 Materials

- 1 Sensor housing: PVDF
- 2 Counter nut: PA6.6
- 3 Cable gland: PA
- 4 Pipe adapter: CuZn nickel-plated
- 5 O-ring: EPDM
- 6 Seal: EPDM

#### Materials of connecting cable

#### PVC

#### Material of G1" counter nut

- Counter nut: PA6.6
- Seal (included in the delivery): EPDM

### Certificates and approvals

#### **CE** mark

The measuring system meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

#### RoHS

The measuring system complies with the substance restrictions of the Restriction on Hazardous Substances Directive 2011/65/EU (RoHS 2).

#### **RCM-Tick marking**

The supplied product or measuring system meets the ACMA (Australian Communications and Media Authority) requirements for network integrity, interoperability, performance characteristics as well as health and safety regulations. Here, especially the regulatory arrangements for electromagnetic compatibility are met. The products are labelled with the RCM- Tick marking on the name plate.

A002956

#### Ex approval

Available Ex approvals: see Product Configurator

Sensors with an Ex approval can be connected to the FMU90 transmitter without an Ex approval.

### Other standards and guidelines

#### EN 60529

Degrees of protection provided by enclosures (IP code)

#### EN 61326 series

EMC product family standard for electrical equipment for measurement, control and laboratory use

#### **NAMUR**

User association of automation technology in process industries

### **Ordering information**

#### Ordering information

Detailed ordering information is available for your nearest sales organization www.addresses.endress.comor in the Product Configurator under www.endress.com

- 1. Click Corporate
- 2. Select the country
- 3. Click Products
- 4. Select the product using the filters and search field
- 5. Open the product page

The Configuration button to the right of the product image opens the Product Configurator.

#### Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

#### 5-point linearity protocol

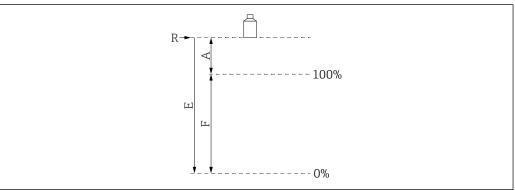

#### Conditions for 5-point linearity protocol

- The 5-point linearity protocol applies for the entire measuring system, consisting of the sensor and transmitter. When ordering, specify the transmitter sensor input where the sensor is to be
- The linearization test is conducted under the reference operating conditions of the transmitter.

#### Position of the linearization points

- The 5 points of the linearity protocol are evenly distributed over the span S.
- In order to define the span, values for **Empty calibration** (E) and **Full calibration** (F) must be specified when ordering.
- The specified values are only used to create the linearity protocol. **Empty calibration** and **Full calibration** are then reset to their factory settings.

#### Conditions for defining the span

#### ■ 12 Variables to define the span

- Reference point (sensor membrane)
- "Empty calibration" (distance from sensor membrane to 0%-point) F.
- F "Full calibration" (distance from 0%-point to 100%-point)
- Distance from sensor membrane to 100%-point
- $E \le 10000 \text{ mm} (394 \text{ in})$
- F = 100 to 9700 mm (3.94 to 382 in)
- $A \ge 300 \text{ mm} (11.8 \text{ in})$

#### Scope of delivery

- Ordered version of the sensor
- For certified versions: Safety Instructions (XAs)
- For sensors with sensor heater: terminal module for installation in the field housing of the FMU90 transmitter
- For sensors with G1" process connection: counter nut (PA6.6) and seal (EPDM)

#### Accessories

#### Sensor extension cable

- Maximum permissible total length (sensor cable + extension cable): 300 m (984 ft)
- The sensor cable and extension cable are the same type of cable.

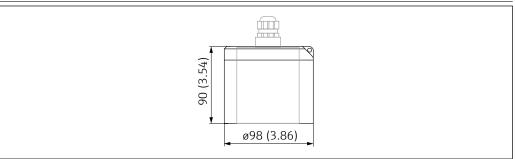

#### Sensor without sensor heater

- Cable type: LiYCY 2x(0.75)
- Material: PVC
- Ambient temperature: -40 to +105 °C (-40 to +221 °F)
- Order number: 71027742

#### Sensor with sensor heater

- Cable type: LiYY 2x(0.75)D+2x0.75
- Material: PVC
- Ambient temperature:-40 to +105 °C (-40 to +221 °F)
- Order number: 71027746

#### Weather protection cover

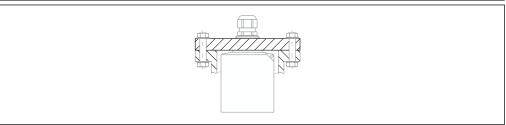

A003994

■ 13 Weather protection cover. Unit of measurement mm (in)

■ Material: PVDF

• Order number: 52025686

#### Screw-in flange FAX50

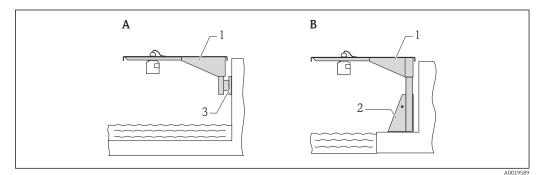

A004426

- Mounting on the rear thread G1 or NPT1
- Available flange sizes: see Product Configurator
- Minimum nominal diameter: DN80 / NPS 3"

### Cantilever arm for the sensors

#### Application

 $\blacksquare$  14 Mounting of sensor with cantilever arm

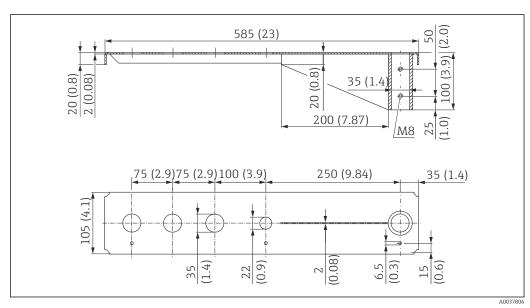

- A Installation on arm with wall bracket
- B Installation on arm with mounting frame
- 1 Cantilever
- 2 Mounting frame
- 3 Wall bracket

#### Use of orifices

- 35 mm (1.4 in) orifice
   Sensor with counter nut
- 22 mm (0.9 in) orifice
   Temperature sensor (e.g. Omnigrad TR61 with TA50 process connection)

#### **Dimensions**

Cantilever arm 500 mm, for G 1" or MNPT 1" connections on rear
